Mazzetti Nash Lipsey Burch and Elysium partner to offer climate change consulting services

27th August 2009

Consulting and engineering firm Mazzetti Nash Lipsey Burch and Israel-based Elysium-Carbon Trade & Investment have entered a joint-venture agreement to offer climate change consulting services.

The services would be available to both US and international clients, the duo said, under M+NLB's BLUE Climate Change Consulting division.

BLUE will provide assessment, accounting, reduction, reporting, and monetisation of greenhouse gases emissions reduction, project development and registration, and assistance with trading in various regional, national, and international carbon markets.

'Carbon regulation is clearly on the horizon for the US, and with it, probable increases in energy prices. Combined with national security concerns and an increasing 'green' awareness amongst their stakeholders, our clients recognise the need to develop strategies to properly position themselves,' said Walt Vernon, M+NLB CEO.

'Our new partnership with Elysium allows us to offer our clients a unique, total energy and greenhouse gas management suite of services. We can help them understand the emerging regulations; measure their emissions and exposure; develop financially responsive strategies; implement energy and emissions reduction strategies; monetise their reductions through offset revenues; and promote their efforts through effective PR campaigns,' Vernon added.

Ofer Ben-Dov, Elysium's CTO, said, 'North American clients who invest in renewable energy, energy conservation, and other clean technologies and infrastructure need tools that will allow them to gain significant economic rewards for their efforts. The combined capabilities of M+NLB and Elysium, and our international carbon market experience, provide a 'one-stop shop', and uniquely position BLUE as a leading full-service provider of climate change mitigation action, from planning and financing to successful implementation.'
